

Finding Aid for the Papers from the WS Ranch Excavation
Bailey Archives, Denver Museum of Nature & Science
Updated: Q3 2020

The WS Ranch Project encompasses the work of the University of Texas Archaeological Field School the Gila National Forest and surrounding areas in in west-central New Mexico between 1977 and 1994. Participants got hands-on experience learning the principles of archaeological excavation while working on a site left behind by people from the Mogollon culture. Excavations occurred mainly at the WS Ranch site, but also included work at nine other locations.

Surveys and test excavation began at the WS Ranch site in 1977 under the guidance of James A. Neely, PhD. Shortly thereafter, surveys and test excavations began at the nearby WS-17 (or HO-Bar) site. Similar test excavations occurred at the WS-5 and WS-41 sites (also known as the McKeen Ranch Site), Eva Faust Site, Devil's Park, Apache Creek Pueblo, O Block Cave, and the Squirrel Springs Site. Several of these sites—including the WS Ranch site, Eva Faust site, and the McKeen site—are partially located on private land. Volunteers from Earthwatch also participated during the field seasons. The archives contain field research reports, scholarly research, student reports, theses, dissertations, and other materials.

This work resulted in a significant number of artifacts and scientific documentation that have never been available to the public. The Denver Museum of Nature & Science acquired the collection in 2017.

Processing Notes

While processing the collection, the vast majority of the papers were kept —items removed include blank forms, duplicate or irrelevant materials, and non-annotated maps. The papers are organized chronologically by each sub-site name within the project, followed by additional surveying work performed on and around the site. These materials will support the work of our colleagues in the Anthropology Department, who will eventually catalog the thousands of artifacts excavated from the site over the two decades that the field school was active.

As of August 2020, we have completed cataloging the documents that make up the core of the collection. Descriptions of those materials are included below. Also included in the collection are uncataloged maps of the excavation areas, as well as a collection of photographs. We will update this finding aid once those materials have been processed.
